

ANUBHAV SNEHI

Senior Software Engineer

📍 Gurugram, India | 📞 +91 6207665579 | ✉️ snehinishu@gmail.com | 🔗 LinkedIn

PROFESSIONAL SUMMARY

Senior Software Engineer with 5 years of experience building and owning large-scale distributed data and backend platforms. Delivered **10M+ records/day** pipelines and event-driven systems across **Snowflake, Kafka, and Databricks**, improving throughput by **65–80%**, lowering compute costs by **20–30%**, and reducing end-to-end processing from **3–5 hours to under 1 hour**. Strong in **system design**, reliability/observability (**Datadog**), data governance/security (**Unity Catalog, RBAC**), and cloud-native microservices on **Azure**; shipped **GenAI automation** that removed **90%** repetitive admin work and saved **20+ hours/week**.

WORK EXPERIENCE

Optum (UnitedHealth Group)

Aug 2022 – Present

Senior Software Engineer (Promoted)

- Scaled a mission-critical, event-driven healthcare platform to reliably process **10M+** member records daily, enabling near-real-time analytics, regulatory reporting, and downstream integrations across the enterprise.
- Accelerated data product delivery across **Snowflake, Kafka, Databricks (Bronze–Silver–Gold)**, backend services, and UI, achieving **zero Sev-1/Sev-2 production incidents** at launch.
- Boosted data freshness and lowered compute costs by **20–30%** by implementing **CDC-driven pipelines (Delta Lake CDF)**; eliminated full recomputations and significantly improved SLA adherence.
- Elevated pipeline throughput and platform efficiency by **65–80%**, cutting end-to-end processing time from **3–5 hours to under 1 hour**.
- Cut infrastructure spend by **\$10K+ annually** by designing high-throughput bulk-copy and backup frameworks that moved **millions of records in 15–20 minutes**.
- Strengthened enterprise security and audit readiness by owning **Unity Catalog migration (RBAC, lineage, governance)** across multiple Databricks workspaces, securing access for **50+ datasets** and eliminating unmanaged permissions.
- Established a single source of truth for **millions of member records**, enabling reliable, near-real-time consumption across **10+ downstream services** by architecting resilient, replayable event-driven ingestion flows (**Snowflake → Kafka → Databricks → Event Hub**).
- Transitioned to a **hybrid MySQL + Cosmos DB data model**, balancing data correctness with performance and streamlining data access patterns for operational teams by **70%** across services.
- Empowered operational teams to process **10K+ documents/day** by delivering fault-tolerant **PDF generation, bulk print, and document workflows** with retries and idempotency.
- Streamlined admin effort and onboarding time from days to minutes by launching **self-service bulk user provisioning**, supporting **100+ users per batch** with full validation and audit trails.
- Improved platform reliability and reduced MTTR by instituting **Datadog-driven observability**, enabling faster root-cause analysis and resolution of high-severity production incidents within SLA.
- Implemented **GenAI-powered agents via Microsoft Copilot Studio**, automating **90%** of repetitive administrative tasks for healthcare staff and saving **20+ hours weekly**.

Think Future Technologies

Jan 2022 – Jul 2022

Software Engineer (Full-time)

- Designed complex React UI/UX flows with real-time chat and RBAC for **300+ users**, while architecting a high-performance dashboard that reduced page load times from **5s to 1.8s (64% improvement)** and navigation friction by **25%**.

Techmihirnaik Group

Aug 2021 – Jan 2022

Technical Head – Promoted from Intern

- Advanced to **Technical Head** within 6 months, leading a team to architect and deliver a multi-vendor platform (hostel booking, food delivery, laundry, transportation, etc.), scaling to **1,000+ users** and achieving **strong early-stage traction**.
- Architected and optimized the platform end-to-end (UI, APIs, admin panel), reducing page load time by **~55%** and manual operational effort by **~40%** through automation.

- Integrated **Razorpay** and managed deployment/hosting, achieving **95%+ payment success rate**, **~99% uptime**, and **98% defect-free** production releases.
- Shipped multiple client applications (including food delivery systems) and collaborated directly with stakeholders, increasing client digital engagement by **30%+** and reducing feature rework by **~35%**.

CORE SKILLS

- **Frontend:** React, Angular, JavaScript, TypeScript, UI Performance, RBAC
- **Backend:** Java, Python, Go, Microservices, REST APIs, Spring Boot, Spring Batch, Event-Driven Architecture
- **Data Platforms:** Snowflake, Kafka, Databricks, Apache Spark, Delta Lake, CDC (Delta Lake CDF), Unity Catalog
- **Databases:** MySQL, Cosmos DB
- **Cloud & Ops:** Azure, Docker, Kubernetes, CI/CD, Git, Datadog
- **Testing:** JUnit, PyTest
- **AI/ML:** Generative AI, RAG, Agentic AI, LangChain, LangGraph, XGBoost, scikit-learn, NLP
- **System Design**

PROJECTS

Healthcare Treatment Cost Prediction

Python, PySpark, scikit-learn, XGBoost

End-to-end machine learning system for healthcare cost prediction using ensemble methods and distributed hyperparameter optimization

- Developed end-to-end ML pipeline predicting patient treatment costs on **20K+ records** — $R^2 = 0.88$ (regression), **F1 = 88.7%** (classification), scoring top grade in Optum AI capstone.
- Benchmarked 11 models via 3-fold CV; tuned XGBRegressor with L1/L2 regularization, reducing overfitting gap by **25%** using Spark-parallelized hyperparameter search (**3x faster**).
- Engineered 4 domain-driven features (smoker $\times$ BMI, BMI^2) boosting predictive signal to **0.56 correlation**; designed zero-leakage preprocessing pipeline with modular, production-grade code.

Health Insurance Claim Approval Agent

- Built end-to-end claim approval system using **Generative AI, RAG, and Agentic AI**, reducing manual claim validation effort by **30–40%** in simulated workflows.

Roommate | Multi-Service Platform

roommate.techmihirnaik.in

Integrated multi-vendor ecosystem for room booking, laundry, and food services

- Created a scalable architecture supporting **1,000+ users**, streamlining service discovery and booking workflows for diverse vendor categories.
- Implemented end-to-end workflows (UI, backend, testing), achieving **98% defect-free** release and reducing production issues by **~60%**.
- Tuned performance using **JavaScript & Django**, ensuring **<2s response time** and **~99% uptime**.

EDUCATION

B.Tech – Information Technology

Bengal College of Engineering and Technology

2022

CGPA: 8.6

CERTIFICATIONS

- **AI DOJO:** Generative AI (Excellent), Machine Learning (Excellent)
- **Microsoft:** AZ-900 Certified; MTA: Java (2021); AI Agents; Copilot Studio; Power Automate
- **GitHub:** Copilot Certification
- **Coding Ninjas:** React Full Stack – Certificate of Completion & Excellence
- **Skillsoft:** Advanced Features in Java
